

Iago Mosqueira

Introduction to R (and computing)

July 9, 2012

## Why programming?

“Can one be a good data analyst without being a half-good programmer? The short answer to that is, ‘No’. The long answer to that is, ‘No!’.”

– Frank Harrell, 1999 S-PLUS User Conference, New Orleans (October 1999)

But this should be easy

“Managing fisheries is hard: it’s like managing a forest, in which the trees are invisible and keep moving around”

- Professor John Shepherd

# Data analyst

# What is R

- Data analysis and statistics environment
- Interpreted computer language
- Open-source software project
- Active community of developers and practitioners
- Current version: 2.15.1, 2012-06-22, Roasted Marshmallows

# Why R?

# GPL v3.0

## GNU General Public License

From Wikipedia, the free encyclopedia

"*GPL*" *redirects here*. For other uses, see *GPL (disambiguation)*.

The **GNU General Public License** (**GNU GPL** or simply **GPL**) is the most widely used<sup>[5]</sup> *free software license*. It was originally written by *Richard Stallman* for the *GNU Project*.

The GPL is the first *copyleft* license for general use, which means that derived works can only be distributed under the same license terms. Under this philosophy, the GPL grants the recipients of a computer program the rights of the *free software definition* and uses copyleft to ensure the freedoms are preserved, even when the work is changed or added to. This is in distinction to *permissive free software licenses*, of which the *BSD licenses* are the standard examples.

### Available Packages

Currently, the CRAN package repository features 3914 available packages.

[Table of available packages, sorted by date of publication](#)

[Table of available packages, sorted by name](#)

## Installation of Packages

Please type `help("INSTALL")` or `help("install.packages")` in R for information on how to install packages from this repository. The manual [R Installation and Administration \[PDF\]](#) (also contained in the R base sources) explains the process in detail.

[CRAN Task Views](#) allow you to browse packages by topic and provide tools to automatically install all packages for special areas of interest. Currently, 29 views are available.

## Package Check Results

All packages are tested regularly on machines running [Debian GNU/Linux](#), [Fedora](#) and Solaris. Packages are also checked under MacOS X and Windows, but typically only on the day the package appears on CRAN.

The results are summarized in the [check summary](#) (some [timings](#) are also available). Additional details for Windows checking and building can be found in the [Windows check summary](#).

## Writing Your Own Packages

The manual [Writing R Extensions \[PDF\]](#) (also contained in the R base sources) explains how to write new packages and how to contribute them to CRAN.

## Welcome to RStudio

RStudio™ is a free and open source integrated development environment (IDE) for [R](#). You can run it on your desktop (Windows, Mac, or Linux) or even over the web using RStudio Server.

 **Download RStudio**  
for Windows, Mac or Linux

The screenshot shows the RStudio IDE interface. The top menu bar includes File, Edit, View, Project, Workspace, Plots, Tools, and Help. The left pane shows the Source editor with R code for loading ggplot2, viewing the diamonds dataset, and creating a scatter plot. The bottom-left pane shows the Console with the output of the summary function. The bottom-right pane shows a scatter plot titled 'Diamond Pricing' with Price on the y-axis and Clarity on the x-axis. The right pane shows the Workspace and History tabs, listing the objects and functions currently in memory.

The screenshot shows the RStudio Server interface, which is a web-based version of the RStudio IDE. It displays the same R code and output as the desktop version, but in a browser window. The interface includes a top menu bar, a left pane for the Source editor, a bottom-left pane for the Console, and a bottom-right pane for the Plots. The right pane shows the Workspace and History tabs.

**ScreenCast**  
RStudio in 2 minutes

## Basic features

- Numerous procedures (algebra, matrix, stats)
- Named storage (everything is an object)
- Functions
- Classes and methods (S3, S4)
- Special values (NA, NaN, Inf, NULL)
- Logical objects and boolean algebra
- `basic_features.R`

## What else can it do?

- Data handling and storage
- Matrix algebra
- Regular expressions
- Statistics!
- OOP
- Programming
- Graphics

# Eye candy

# Eye candy

# Eye candy

*Maunga Whau Volcano*

## What doesn't it do

- No DB, but connections (SQL, NoSQL, Spreadsheets)
- No GUI, but IDE & GUI toolsets - CLI
- Slow, but C/C++, HPC
- No commercial support, but community
- Think for you

# Help!

- Help for each function and data type
- ?mean
- ??mean
- ?help
- <http://rseek.org>
- stackoverflow, <http://stackoverflow.com/questions/tagged/r>
- Mailing lists

- Stock assessment and provision of management advice
  - ▶ Well tested, robust methods
  - ▶ Open to detailed inspection
- Data and model validation through simulation
- Risk analysis
- Capacity development & education
- Promote collaboration and openness in quantitative fisheries science
  - ▶ Open source
  - ▶ Community involvement
  - ▶ R as lingua franca
- Support the development of new models and methods
  - ▶ Extensible toolset
  - ▶ Links to other tools (ADMB, BUGS, ...)

## FLR PROJECT

TABLE OF CONTENTS

**Training Course**  
**Intro to R and FLR for Fisheries**

**3-5 JULY 2012 – Varese, Italy**  
Registration now open at [FishReg EC JRC](#)

The FLR library is a collection of tools in the [R](#) statistical language that facilitates the construction of bio-economic simulation models of fisheries and ecological systems. It is a generic toolbox, but is specifically suited for the construction of simulation models for evaluations of fisheries management strategies. The FLR library is under development by researchers across a number of laboratories and universities.

*Love it !! Take me to the [Table of Contents](#) !!*

You can install the **stable releases** for [R >= 2.13.0](#) with

```
install.packages(repos="http://flr-project.org/R")
```

or you can install the **development packages** for [R >= 2.14.0](#) with

```
install.packages(repos="http://flr-project.org/Rdevel")
```

You can get help by subscribing our [mailing list](#) and posting your doubt, or reading the **tutorials** on the ["Teach yourself FLR" wiki](#).
